DETAILED ACTION

1. Claims 1-17 are presented for examination.

Claim Rejections - 35 USC § 112

2. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
 - a. As per claim 1: line 6, the use of "the free capacity" by itself is vague and indefinite. Should it be --the free capacity of the data accumulation unit--? See also claim 16, line 8.
 - b. As per claim 14, line 9, the intended means for "a data accumulation unit" is unclear. It appears that the "data accumulation unit" should be replaced with --data accumulation unit of a storage service providing device--so that it is distinguished from the data accumulation unit of the user terminal, as recited in line 6. Similarly, in line 14, "data accumulation unit" should be replaced with --data accumulation unit of the storage service providing device--.
 - c. As per claim 16: line 2, it appears that "comprising computer executable codes" should be inserted right after "program" for clarity and avoid a possible problem under 35 USC 101 problem.
 - d. As per claim 17: Line 2, it appears that "wherein:" should be replaced with --the process further comprising:--. In line 3, replace "it is determined" with --determining--.
 - e. Claims 2-4 and 15 are rejected as including the deficiencies in the independent claims 1 and 14.

Allowable Subject Matter

3. Claims 5-13 are allowed over the prior art of record.
4. Claims 1-4 and 14-17 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Art Unit: 2187

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - a. Noya et al., 5,309,451, teach storage system that prefetches parity data from disk drives to the cache so that new parity data can be calculated when the cache memory reaches a predetermined level of fullness.
 - b. Brooks et al., 5,483,276, teach a user that detects when the amount of data stored in a memory within the unit is approaching the capacity of the memory and provides indication that the unit should be docked for uploading data.
 - c. Faris et al., 5,488,359, teach a method and apparatus for setting a memory full condition in a selective call receiver.
 - d. Rosich et al., 5,551,002, teach storage system that detects when the cache capacity reaches a predetermined level of fullness, the cache is then preparing cached data for destaging to the lower level memory.
 - e. Jerding et al., US 2002/0104097, teaches a data storage system that determines available storage before downloading data.
